

A Flexible Software Platform that Enables your Self-Service Network to do More.

Despite the move to digital and mobile technologies, the self-service channel remains a key component of a critical macro trend: connecting the physical world to the digital world.

Strongly influenced by experiences with personal computing, mobile technology and multichannel retailing, today's consumers define the ideal banking experience as one that is easy, fast, secure, consistent and personalized. Our approach to self-service software matches that expectation and redefines how consumers connect with their financial institutions (FIs), making the experience more intuitive, quick, safe and personal. With VISTA as the single software interface, FIs are able to maximize efficiencies in maintenance and replenishment, and provide a consistent, interactive consumer experience regardless of the manufacturer.

FLEXIBILITY FOR YOU AND YOUR CONSUMERS

- Supports location-aware themes, business rules and messaging across ATMs and kiosks, regardless of vendor
- Offers an intuitive interface with individualized functionality and content
- Allows consumers to change their preference settings independently at the terminal
- Enables the use of customer-based preferences, such as a personal fast cash amount, preferred language and receipt preference (email and SMS receipts require additional software)
- Makes customer-selected bill mix a standard transaction capability where supported by the network

SIMPLIFIED, STREAMLINED PROCESSES

- Supports on-us transactions that connect directly to core systems (additional software required)
- Integrates easily with host systems and web services to boost self-service revenue generation
- Requires few or no modifications to the host to support new features, devices and transactions
- Allows operators to make configuration changes remotely from the switch without requiring a reboot of the terminal
- Eliminates vendor-matched software and protocols and uses a single ATM application to run an entire network from one switch

MULTI-VENDOR FUNCTIONALITY

VISTA powers self-service options across devices, and delivers meaningful interactions between consumers and their FIs. The accompanying pre-packaged ATM application features the most commonly used consumer and settlement transactions and functionality that can be deployed "as is," with the option to add on additional functionality as desired.

VISTA MAKES IT EASIER THAN EVER TO CONNECT PHYSICAL AND DIGITAL TOUCHPOINTS.

Features

- Rich graphical interface
- Multichannel
- Industry standard protocols: CEN-XFS, IFX, NDC, SNMP, SOA, WMI and more
- Operating system support: Microsoft Windows XP, Windows 7 and Windows 10

Security

- EMVco Level 2
- Remote Key Management

Configurability

- Integrated development environment (IDE): VISTA developers Workbench (Optional)
- Simulation tools: VISTA Developer Workbench (Optional)
- Test tools: VISTA Developer Workbench (Optional)
- "Look and feel"
- Transaction flow
- Multiple languages
- Customizable receipts
- Voice guidance

Standard Transactions

- Withdrawal, Fast Cash, Dynamic Currency Conversion
- Deposit (Envelope, Cash, Checks, Mixed, Parallel)
- Recycle
- Payment
- Single Balance Print or Display, Print Statement
- PIN Services: Change PIN
- Stamps, Coupons
- Multi-language, Audio Support
- Targeted Marketing by BIN, by Transaction, by Time of Day
- Marketing Message on Paper Receipt
- Secure User and Role-Based Access, Financial Replenishment, Media Replenishment, Diagnostics, Vendor Diagnostics, Terminal Set-up

Connectivity

- Optional components can be purchased to extend the functionality of VISTA
- COMMANDER 5.0
- XPRESSION 5.0
- Availability Management and Security capabilities offered via Managed Services
- Dynamic View 5.0
- Dynamic Transaction Automation 2.0
